

## Motivation

Networks have complex relationships

Modelled flexibly by hypergraphs

## Hypergraph Semi-Supervised Learning

Label vertices in  $U$  given labelled vertices in  $V - U$

$$\mathcal{H} = (V, E)$$

### Challenges

- arbitrary size  $E \subseteq 2^V$
- low supervision  $|V - U| \ll |U|$
- noisy edges  $|y_v : v \in e| > 1, e \in E$

- explicit regularisation [Zhou et al., Hein et al.]

$$\mathcal{L} = \mathcal{L}_S + \lambda \cdot Q(\mathcal{H}, f) \quad \text{✗ hyperedges encode similarity}$$

- implicit regularisation [Feng et al.]

$$f_{\text{Neural}}(\mathcal{H}, X) = ? \quad \mathcal{L} = \mathcal{L}_S \quad \text{✓ need not encode similarity}$$

## Method

GCN [Kipf and Welling]

$$H^{\{l\}} = \sigma \left( A \cdot H^{\{l-1\}} \cdot W^{\{l\}} \right)$$

HyperGCN

$$f = H^{\{l-1\}} \cdot W^{\{l\}}$$

FastHyperGCN

$$f = H^{\{0\}} = X$$

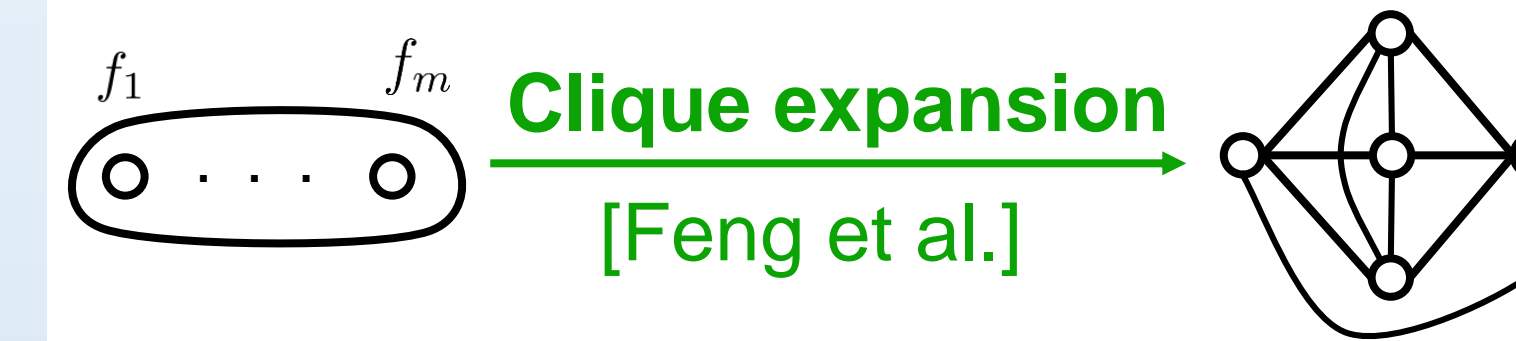

## Densest k-subhypergraph

$$W \subseteq V, |W| = k, \text{ maximise } |e \in E : e \subseteq W|$$

## Results

Simple, strong baseline: HGNN

test error (lower is better)

Avg. size	8.5 ± 8.8	4.3 ± 5.7
Dataset	DBLP	Pubmed
HGNN	45.27 ± 2.48	29.41 ± 1.5
HyperGCN	<b>41.64 ± 2.6</b>	<b>25.56 ± 1.6</b>
FastHyperGCN	41.79 ± 2.8	29.48 ± 1.6

comparable on small hyperedges

Avg. size	3.0 ± 1.1	3.2 ± 2.0
Dataset	Cora	Citeseer
HGNN	32.41 ± 1.8	37.40 ± 1.6
HyperGCN	32.37 ± 1.7	37.35 ± 1.6
FastHyperGCN	32.42 ± 1.8	37.42 ± 1.7

training time (lower is better)

Dataset	DBLP	Pubmed
HGNN	0.115s	0.019s
FastHyperGCN	<b>0.035s</b>	<b>0.016s</b>

more accurate, faster on large noisy hyperedges

density for  $k = 0.75 \cdot |V|$  (higher is better) and training time (lower is better)

Dataset	DBLP	Pubmed	Cora	Citeseer
HGNN	6274	7865	437	<b>969</b>
HyperGCN	<b>7720</b>	<b>7928</b>	<b>504</b>	<b>971</b>
FastHyperGCN	7342	7893	452	<b>969</b>

Type	Training Time	Density
HGNN	170s	337
FastHyperGCN	<b>143s</b>	<b>352</b>

## Going forward

- unsupervised learning
- label correlation
- hypergraph pooling

code
